

Predicting H1N1 Vaccine Uptake

Introduction

The National 2009 H1N1 Flu Survey investigated vaccination uptake and factors influencing individual decisions. This presentation explores how backgrounds, opinions, and health behaviors affect H1N1 vaccination choices, vital for effective public health strategies.

Business understanding

- Vaccine uptake is crucial for public health.
- By analyzing acceptance factors, we can tailor strategies to boost vaccination rates and enhance community immunity.

Problem statement

- The goal of this project is to develop a predictive model assessing the probability of individuals opting for the H1N1 vaccine.
- Factors considered include demographics, socio-economic status, and attitudes.
- The model aims for accuracy in predicting vaccine uptake to inform public health strategies effectively.

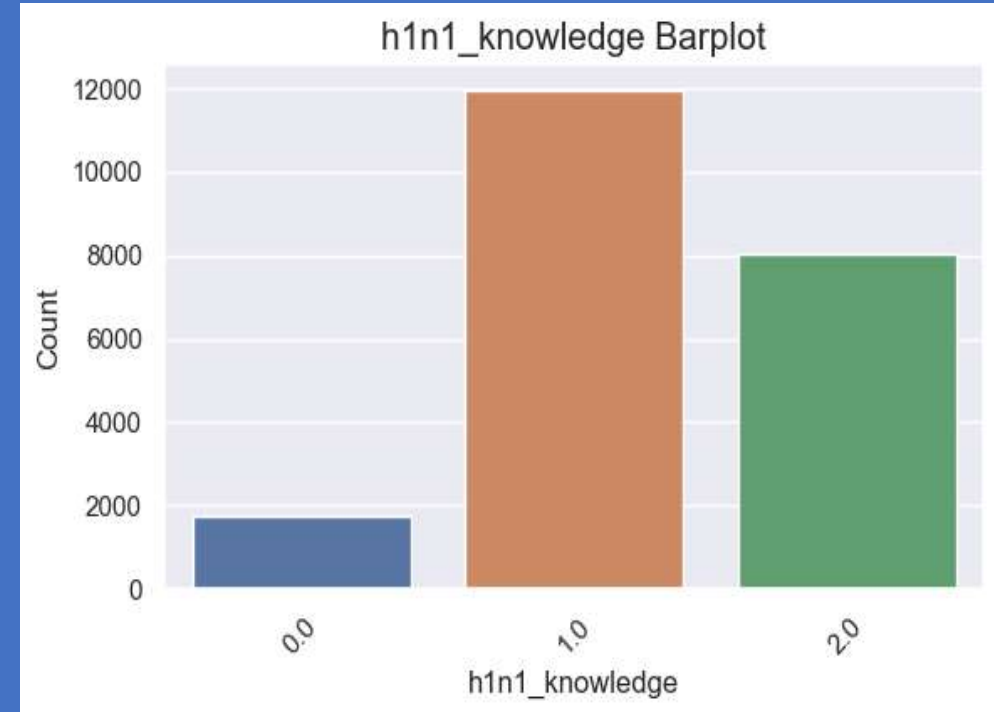

Objectives

1. Develop a Robust Predictive Model for estimating H1N1 vaccine uptake likelihood.
2. Identify Key Predictors of H1N1 Vaccine Acceptance.
3. Generate insights and recommendations

Data features

Distribution of behavioral_antiviral_meds

Distribution of behavioral_avoidance

Distribution of behavioral_face_mask

Distribution of behavioral_wash_hands

Distribution of behavioral_outside_home

Distribution of behavioral_touch_face

Feature Importance Ranking for Logistic Regression Model

Key Factors Influencing H1N1 Vaccine Uptake:

1. Doctor's Recommendation
2. Perception of Infection Risk
3. Belief in Vaccine Effectiveness
4. Healthcare Worker Status Behavioural Practices

Recommendations

- Promote Doctor Recommendations: Encourage healthcare providers to recommend the H1N1 vaccine.
- Highlight Health Risks: Emphasize risks of contracting H1N1 without vaccination.
- Address Perceived Risks: Clarify misconceptions about H1N1 vaccine risks.
- Enhance Awareness: Strengthen communication on H1N1 vaccine effectiveness.
- Target Health Workers: Promote vaccination among healthcare workers.

Next steps

- Provider Training: Train healthcare staff to promote H1N1 vaccine benefits.
- Research Needs: Investigate reasons for negative vaccine associations.
- Monitor and Adapt: Continuously assess and adjust strategies for uptake improvement.
